OPEN TO LEAD ROLES IN THE UK

PROFILE

Hands-on lead engineer with **9 years** architecting offline-first Java and Flutter systems at national scale. Within a 40-engineer group I **lead a team of 10+ engineers** and own delivery end to end, from government requirements to production. I designed the configuration-driven architecture behind MEDplat, an open-source, FHIR-compliant health platform and registered Digital Public Good, led its Android-to-Flutter migration, and built voice and on-device AI workflows. I still write code every day.

300M

citizens reached by
systems I architected

250K+

health workers using it
daily

12

deployments on four
continents

30x

faster sync (5 min → 10 s)

10x

faster data entry with
voice / AI

TECHNICAL SKILLS

Languages	Java, Dart, Kotlin, SQL
Backend	Spring Boot, Spring Security, REST APIs, Microservices, JPA / Hibernate, Swagger / OpenAPI
Mobile	Flutter, Android, Bloc, GetIt, Clean & Modular Architecture, Offline-first, Multi-flavor builds, pub.dev packages
Web	Angular and React (technical guidance for the web teams)
Data	PostgreSQL, SQLite, Flyway, query optimisation (CTEs), data sync & conflict resolution
Architecture	System design, configuration-driven systems, dynamic form & rule engines, FHIR (DHIS2, CommCare), encryption, RBAC, audit logging
Applied AI	Whisper speech-to-text, on-device Qwen LLM (offline), Gemini (online), voice-driven data entry
DevOps	Git, Jenkins CI/CD, Docker, AWS, Firebase (Analytics, Crashlytics)
Leadership	Team leadership, hiring & technical interviews, mentoring, code-review standards, sprint planning, release management, stakeholder management, Agile / Scrum

EXPERIENCE

Argusoft India Ltd

Gandhinagar, India · 2017 - present

MEDplat: open-source, FHIR-compliant public-health platform and registered Digital Public Good, used daily by 250,000+ health workers serving 300 million citizens and recording 1M+ health services a day.

Group Lead, Technology

2023 - present

- Lead a team of **10+ engineers** across backend, mobile and web within a 40-engineer group. Run hiring, onboarding, code-review standards, sprint planning and releases; grew 10+ engineers into implementation owners.
- Designed the **configuration-driven form configurator and renderer**, so new deployments need no code changes: a new state in a week, a new form in a day. This is what scaled the platform to **12 deployments**.
- Own delivery for government and NGO clients (Government of Gujarat, UP NHM, Daman & Diu, Zambia MoH), consistently meeting rollout deadlines while managing scope and production releases.
- Led the **Android-to-Flutter migration** to a single codebase with a shared design system, multi-flavor builds and Jenkins pipelines, so every deployment releases independently.
- Built **voice and AI-assisted form filling** (Whisper, on-device Qwen offline, Gemini online), cutting form entry from 3–4 minutes to about 20 seconds.
- Delivered a **FHIR-compliant, interoperable architecture** on Google's Open Health Stack (Android FHIR SDK), shaped by field research with Sewa Rural. Encryption, RBAC and audit logging throughout; government data on-premise, NGO data on AWS.
- Built PostgreSQL immunisation-inventory and product modules that replaced manual stock reconciliation with real-time tracking; published reusable Dart / Flutter packages to pub.dev.
- Guide the Angular and React teams on form configuration and rule evaluation, keeping backend schemas, web and the Flutter engine aligned across releases.

Lead Solution Analyst

2022 - 2023

- Owned the **Uttar Pradesh (eKavach)** implementation end to end, from client calls and requirements to production rollout: the platform's largest deployment, serving **220 million citizens**.
- Designed Spring Boot services with Spring Security and architected the Flutter app (Bloc, GetIt) with offline data models, sync and conflict resolution for low-connectivity field use.
- Cut data-sync time from **5 minutes to about 10 seconds** by redesigning the sync strategy and tuning the heaviest queries.

Senior Programmer Analyst

2020 - 2022

- Built a fully dynamic **learning management system** (web course builder and mobile player for every media type) that trained about **175,000 health workers**; it also powers Amma Kosam in Telangana.
- Developed the offline-first Android app and dynamic form engine on SQLite for the first state rollouts, the foundation of the later configuration-driven platform.
- Optimised SQLite storage for performance and reliability on low-end field devices.

Programmer Analyst

2017 - 2020

- Built the platform's early backend: Java and Spring services with JMS messaging, JSP and JDBC. Supported the first production deployments and improved their stability.

DEPLOYMENTS I HAVE ARCHITECTED OR DELIVERED

eKavach, Uttar Pradesh (220M citizens) · **TeCHO+**, Gujarat (65M; 99% of registered children immunised) · **i-MoMCARE**, Cambodia (Gates-funded RCT with NUS, peer-reviewed in BMJ Digital Health & AI, 2026) · **CHiP**, Zambia · **JamVax**, Jamaica's national electronic immunisation registry · **DDD-PHMP**, Daman & Diu · **ImTeCHO**, Sewa Rural · **Saath**, Bahaar Foundation · **DigiSakhi**, Seva Mandir · **OASIS**, LSHTM antimicrobial-resistance project · **Amma Kosam**, Telangana · **Impact Health**, Nigeria

EDUCATION

B.Tech, Computer Science & Engineering, Distinction
Gandhi Institute of Technological Advancement, Odisha ·
2013 – 2017
Taught in English

SIDE PROJECT

Shelfmark (Flutter): tracks reading progress across PDF collections, with per-series libraries, resume where you left off, reading streaks and backup / restore.
github.com/prtkgrg/shelfmark

RECOMMENDATION

"Prateek approaches problems thoughtfully and takes responsibility for delivering quality solutions. He remains calm under pressure..." **Kunjan Patel**, Group Director (Technology), Argusoft
